

## Gliderol Roller Door Details - Domestic

Gliderol doors fit onto the rear of the brick aperture which gives maximum drive through width. Very light one-handed operation on manual doors. Remote control automatic version available at extra cost.

Door viewed from inside. There are no tracks hanging from the ceiling thus maximising garage space / neatness. Note headroom required between bottom of lintel and ceiling to accommodate the roller barrel. See diagrams below for technical requirements

The Automatic Gliderol Roller Door has the Motor neatly inserted into the end of the door drum. Note the Red Lever which disengages the Motor easily in the event of a power failure and enables the door to be opened manually.

The Auto Unit comes with a Courtesy Light and up/down switch. This is mounted onto the garage wall adjacent to the Motor end of the door. The Auto Kit comes complete with 2 x multi button handsets as standard.

All Electrical components are guaranteed for 2 years.  
 All Mechanical parts are guaranteed for 5 years.  
 All door finishes are guaranteed for 10 years.
